

## Flaminal® - figuring out cost efficiency in wound care

Ready to use throughout all phases of wound healing, no cytotoxic effect and easy to apply. These are the advantages to which the Enzyme Alginogel Flaminal® owes its strong market position in such countries as Belgium and the Netherlands. At present, however, medical efficiency alone is not sufficient to meet the requirements of modern wound management regarding first choice products. With view to the medical treatment costs, especially for chronic wounds, economic concerns play an important role. Flen Pharma is perfectly conscious of this and therefore developed a free tool, through dialogue with wound experts, that calculates the costs for a wound treatment on the basis of the therapeutic standard. The so called Flaminal® “wound calculator” (“Wundrechner”) simulates different wound scenarios, like complications, inpatient and outpatient treatment, for the venous leg ulcer (ulcus cruris venosum), which is, besides the decubitus and the diabetic foot ulcer, the prevalent form of chronic wounds. The Flaminal® based therapy proves to be currently, throughout all wound scenarios, the most cost efficient wound therapy.

The Flaminal® wound calculator will shortly be accessible via the new German-language website of Flen Pharma. During the EWMA 2016 this helpful and easy to handle tool for the day-to-day running of practices and clinics will be presented beforehand and all those interested in discovering it already by now are invited to our **symposium on cost efficiency in modern wound care (“Zeitgemäße Wundversorgung - erfolgreich und wirtschaftlich”)**. Join us on the **12<sup>th</sup> of May at 15h45 in room Lloyd**. We are pleased to welcome established specialists and clinic employees, who will share and discuss their experience in using Flaminal® with you. Please be aware that all presentations are held in German language, but we will gladly translate your requests in case needed.

The economic efficiency of Flaminal® in wound therapy is subject of a peer-reviewed article in the German Journal of ClinicoEconomics (Dr. Stefan Walzer: *Eine Kosten-Effektivitätsanalyse der Behandlung des Ulcus cruris venosum und mixtum in Deutschland mit Flaminal®*, Bd. 1/2016, S. 1-12). This article is written in German language and includes a short summary in English. We keep it in stock for you at our booth (number 1 C 01) and our English and German speaking team is looking forward to welcome you there!

### About Flen Pharma:

The Flen Pharma GmbH is part of the Flen Group with 4 subsidiaries in Europe and an international distributor network, spanning from the Middle East to Australia and China. Our patented products, based on advanced bio-pharma technologies are the result of in-house development. We steadily broaden our focus on modern wound care to innovative products which foster skin health also in other areas, improving quality of life. On the German market we are actually present with our Enzyme Alginogels Flaminal® Hydro and Flaminal® Forte. They build a unique class of products that covers all four phases of the TIME concept for wound healing. In other countries we are equally present with the following products: Flamirins® (wound cleansing solution), Flamigel® (hydro-active colloid gel for the treatment of minor wounds and light burns/sunburns) and Extracalm® (hydrogel spray that soothes itching and cools the skin).
